### **FREE RADON TEST KITS AVAILABLE IN OCTOBER**

Chris Klawuhn, Saginaw County Environmental Health Director, announced today that the Saginaw County Department of Public Health is distributing free radon test kits in October. He encourages area residents to get a kit and test their home during the coming heating season and, if necessary, to take action to reduce their exposure to this tasteless, odorless, colorless, radioactive gas.

Stating that some area residents may be at risk of developing lung cancer from exposure to elevated levels of radon gas in their homes, Klawuhn said, "We are encouraging Saginaw County residents to stop by the health department and pick up a radon test kit, and more importantly, to use that kit during the coming heating season."

According to the U.S. Environmental Protection Agency (EPA), radon is the second leading cause of lung cancer in the United States, surpassed only by cigarette smoking, and it is a significant environmental health threat that can be easily detected. When elevated radon levels are found, residents should confirm the measurements with additional testing, and then take action to reduce the levels in their homes.

Radon occurs naturally in soil and rock, but being a gas, it can move upward through the soil and it enters buildings through cracks and openings in the foundation floor or walls. Typical entry points include floor/wall joints, sump openings, crawlspaces, cracks in the floor, and other penetrations caused by plumbing, wiring, or ductwork. Outdoors, it is diluted by the atmosphere, but indoors it tends to be more concentrated and can accumulate to unhealthy levels. Klawuhn is quick to add that "the only way to know if your home has an elevated radon level is to test your home."

"Because radon is invisible and can't be smelled, it's easy to ignore," Klawuhn said. "It doesn't cause headaches, nausea, fatigue, skin rashes, or other warning symptoms that might be experienced as a result of exposure to many other environmental toxins, yet extended exposure to elevated radon levels may increase one's risk of lung cancer, a generally fatal disease."

EPA estimates that radon is responsible for more than 21,000 deaths in the U.S. each year, and a Michigan Public Health Institute report estimates that more than 600 of those occur here in Michigan. Nearly one in eight homes in Michigan has elevated radon levels.

Testing is easy and inexpensive, Klawuhn says. The do-it-yourself test kits distributed by the health department are normally available for \$10.00, and that includes postage back to an out-of-state lab, as well as the fees for having the device analyzed and a report sent back to the consumer. Free kits are available through the month of October in Room 101 at the Saginaw County Department of Public Health, 1600 N. Michigan Avenue in Saginaw.

For more information, call Environmental Health Services at (989) 758-3686 or visit [www.saginawpublichealth.org](http://www.saginawpublichealth.org). The Michigan Department of Environmental Quality also has a toll-free number at 1-800-RADON GAS (1-800-723-6642).
